# ASHIDA Numerical OC / EF Protection Relay (4 Elements)

Type: ADR141A  
ADR241A (Communicable)  
(**ADITYA Series**)  
*Preliminary*

## Features:

- 4 Element (3 Phase + EF) over current IDMT with instant trip.
- Back - lit LCD display for settings.
- Display of Load current in terms of primary.
- Selection of Curve: Seven selectable curves Normal Inverse1 (C1), Normal Inverse2 (C2), Very Inverse (C3), Extremely Inverse (C4), Extremely Inverse (C4A) EE Equivalent, Long Time Inverse (C5) & Definite Time (C6).
- Separate curve selection for phase and EF.
- **Design using DSP technology.**
- Latching of fault current up to last 5 faults with time stamping.
- Password protection for setting.

- Site selectable CT secondary
- Relay can be made either IDMT or Define time
- Programmable operating time in instantaneous element
- Cold Load pickup for prolong inrush current.
- In Build Breaker Fail & Trip Circuit Supervision Function
- Programmable Annunciation Contact
- RS 232 (at front) and RS 485 (at rear side) Communication Port for remote SCADA (only for ADR241A i.e. communicable Relay).

## General:

The ADR141A is member of Ashida Numerical Relay family (**Aditya Series**) design to meet demand of low and medium switchgear control. The ADR141A is a 3 OC and 1 EF relay with Instantaneous high set and programmable output to simplify feeder protection wiring. The ADR141A continuously monitors all phases and earth current, through CT connections. The high-speed micro-controller **samples** this current through a **12-bit A/D converter**. The micro-controller performs powerful **Digital Algorithms** to find out Amplitude of current signal, and then this value is used for protection and metering function. All measurement is tuned to fundamental frequency. Each input current is also displayed on 16 x 2 LCD display for metering. The Relay is having main three functions 1) Protection 2) Self-Supervision 3) Measurement

*Note: Due to our policy to upgrade our products constantly, we reserve the right to supply products which may vary slightly from that indicated above.*

Page 1 /10

The Relay can be supplied with different model. It can be either Definite Time or IDMT.

### 1. Protection Functions:

The ADR141A give maximum benefit/cost ratio. The ADR141A give all the advantage of numerical relay at affordable cost. Following is summary of different protection functions provided by relay.

ANSI	IEC	Protection Functions
50	$I >>$	Instantaneous Over current Protection (OC-Inst.)
50N	$I_E >>$	Instantaneous Earth Fault Protection (EF-Inst.)
50,51	$I > t, I_p$	Time Over current Protection (Phase) (OC-IDMT.)
50N,51N	$I_E > t, I_{EP}$	Time Over current Protection (Earth) (EF-IDMT.)

#### 1.1 Over current / EF protection:

**Model: AM-110-01-01-xx-xx-xx-xx. & AM-120-01-02-xx-xx-xx-xx.**

The relay has 4 sensing element 3 OC and 1 EF. The tripping current can be set from 5% to 250% for phase and 5% to 250% for Earth fault in steps of 1% by Keys provided on front panel. The unit has got selection of IDMT characteristic of international IEC standard Very inverse / Extremely Inverse / Long Inverse and Standard inverse (both 3.0 sec and 1.3sec at 10 times). The Time Multiplier Setting (TMS) for the IDMT delay multiplication is from x0.01 to x1.5 which can be adjusted in steps of x0.01. The instantaneous tripping function is having range of 50% - 3000% for phase and 50% - 3000% for EF and can be set in steps of 50%.

The high speeds CPU continuously monitor the all four current inputs and compare with IDMT as well as instantaneous setting. If anyone current is above instantaneous setting the relay provides immediate trip command bypassing IDMT delay. If input current is less than instantaneous setting but more than IDMT setting, CPU calculate IDMT delay as per selected IDMT characteristic multiply it with TMS setting and provide trip command if fault is persist even after this time delay.

**Model: AM-410-01-01-xx-xx-xx-xx. & AM-420-01-02-xx-xx-xx-xx.**

The relay has 4 sensing element 3 OC and 1 REF, the EF is internally calculated from the 3 phase i.e. 3I/O. The tripping current can be set from 10% to 250% for phase, 10% to 250% for Earth fault (3I/O) and 5% to 100% for REF in steps of 1% by Keys provided on front panel. The unit has got selection of IDMT characteristic of international IEC standard Very inverse / Extremely Inverse / Long Inverse and Standard inverse (both 3.0 sec and 1.3sec at 10 times). The Time Multiplier Setting (TMS) for the IDMT delay multiplication is from x0.01 to x1.5 which can be adjusted in steps of x0.01. The instantaneous tripping function is having range of 50% - 3000% for phase and 50% - 3000% for EF and can be set in steps of 50%. The delay for REF operation can be set from 0 – 2.0s in steps of 0.01s.

*Note: Due to our policy to upgrade our products constantly, we reserve the right to supply products which may vary slightly from that indicated above.*

Page 2 / 10

The high speeds CPU continuously monitor the all current inputs and compare with IDMT as well as instantaneous setting. If anyone current is above instantaneous setting the relay provides immediate trip command bypassing IDMT delay. If input current is less than instantaneous setting but more than IDMT setting, CPU calculate IDMT delay as per selected IDMT characteristic multiply it with TMS setting and provide trip command if fault is persist even after this time delay. Similarly when the REF current exceeds the REF settings the relay will sense the fault and gives the trip after completion for the set Delay.

All the settings are password protected to prevent unauthorised change.

## 1.2 Extra Alarm Contact:

Any Protection panel required extra contacts for provide visual ALARM and ANNUNCIATION indication for operator. Also some status contacts for SCADA or remote indications. Usually separate electromechanical relay used for contact multiplication of protection relay contacts. This added extra wiring and extra hardware. The ADR141A provide separate programmable ALARM contact for such application. Maximum 4 nos. of extra contacts can be provided. These contacts can be programmed as follows:

For Model No: AM-110-01-01-xx-xx-xx-xx.

	ANN. TYPE 1	ANN. TYPE 2	ANN. TYPE 3	ANN. TYPE 4
RELAY 1	OC1	OC HF	HF	COM. ALARM
RELAY 2	OC2	OC IDMT	IDMT	PROTH.
RELAY 3	OC3	EF HF	PHASE	PHASE
RELAY 4	EF	EF IDMT	EF	EF

For Model No: AM-410-01-01-xx-xx-xx-xx.

	ANN. TYPE 1	ANN. TYPE 2	ANN. TYPE 3	ANN. TYPE 4
RELAY 1	OC1	OC HF	HF	REF
RELAY 2	OC2	OC IDMT	IDMT	PROTH.
RELAY 3	OC3	3I/O HF	PHASE	PHASE
RELAY 4	3I/O	3I/O IDMT	3I/O	3I/O

## 2. Supervision Function:

### 2.1 Self-supervision:

The continuously keeping track on its internal hardware and the movement it detect any failure of any component, it give message on LCD display, This feature is very useful to give pre information to avoid any mall - operation. In such situation it uses some default setting and remains in protection mode.

## 3. Measurement Function:

In normal condition this display shows all settings. Via keyboard the display can be program to show the actual current flowing through the relay. If current excesses set value the relay gives trip command. The type of fault is displayed on LCD display. **During the fault condition the relay measure the fault current and store in non-volatile memory. The fault current can be read via keyboard on LCD**

Note: Due to our policy to upgrade our products constantly, we reserve the right to supply products which may vary slightly from that indicated above.

Issue: 06 10.12.11

Page 3 /10

display Last 5 fault values along with tripping counter can be view via key-board. All settings are save in electrically erasable read only memory and remain.

#### 4. Breaker Fail Function (BF or LBB)

Normally after tripping current should be come Zero within 100 – 200ms time depend upon type of fault and breaker mechanism. After Fault Relay start one internal timer (settable from 0.05s to 0.8 s) If fault is not cleared during this time then relay declare as Breaker fail (LBB function)

#### 5. Cold Load Pickup

Relay also equipped with cold load pick feature. During switching of load relay sense closing of CB by auxiliary contact of CB (through dedicated Status input marked as CB NO). Once CB closing is detected relay automatically switch settings to cold load setting (which independently adjustable) for pre define time (adjustable). After this cold load time relay switch back to original setting automatically and avoid wrong operation of relay.

#### 6. Trip circuit Supervision & Status:-

The ADR141A is having 2 separate digital opto-coupler status input which can be used to continuously monitor continuity of trip-circuit. The general scheme is as shown in fig.

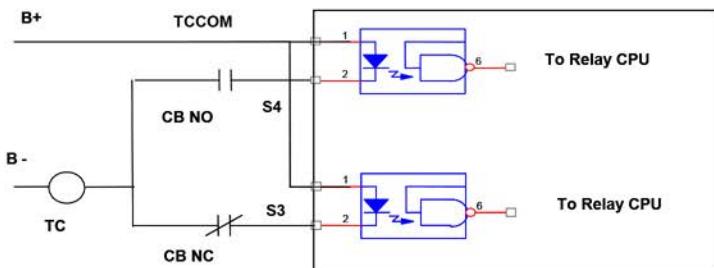

Fig. Trip Circuit Logic

Relay monitor Trip coil continuity through CB NO during close condition and through CB NC during Trip condition. If any discontinuity observed it generate Alarm signal. One changeover contact is provided for ALRAM and will operates when S3 and S4 both active and both inactive. i.e CB NO as well as CB NC are both close or open.

Along with this two general purpose Status inputs S1 and S2 are given for SCADA application

Note: Due to our policy to upgrade our products constantly, we reserve the right to supply products which may vary slightly from that indicated above.

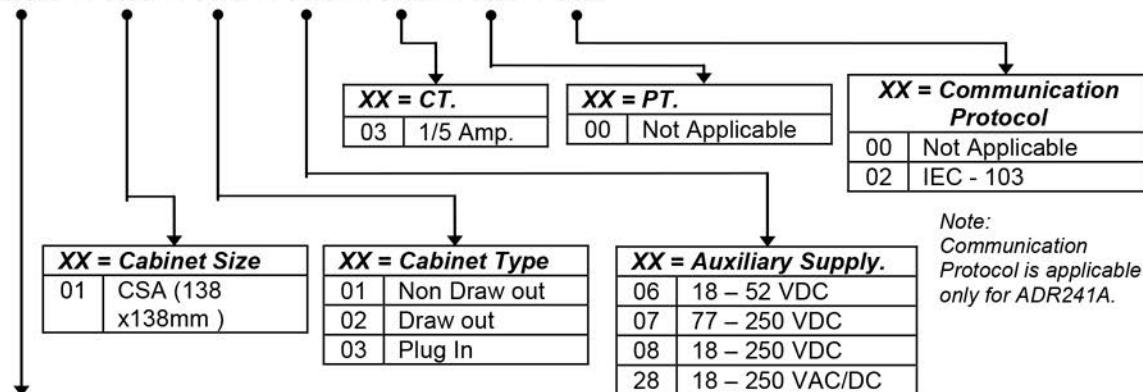

## 7. Ordering Information:

The relay is available with nos. of different option. The option is specified by model no. It is user responsibility to specify correct model no. while ordering.

While Ordering Specify the following Information for **ADR141A** Relay

### Definition of Model No for ADR141A Relay

AM XXX - XX - XX - XX - XX - XX - XX - XX

#### XXX = Sub Type

110	<b>3OC + EF + HF Relay</b> OC:5 - 250 % in steps of 1%, OC HF:50 – 3000 % in steps of 50%, OC TMS: X0.01 – X1.5 in steps of X0.01 EF : 5 - 250 % in steps of 1%, EF HF: 50 – 3000 % In steps of 50% , EF TMS: X0.01 – X1.5 In steps of X0.01 <b>Contacts:</b> 2NO For trip, 4 NO for Ann., 1NO for BF, 1C/O for TCS. <b>Status:</b> 2 nos. Dedicated for TCS and 2 Nos. for Spare. With Cold Load function.

		C2	- APR01801
		C3	- APR05101
		C4	- APR05201
		C4A	- APR02801
		C5	- APR05301
	: For Electrical Connection	Model: AM110-01-01-xx-xx-xx-xx.	- APR06815_A
		Model: AM120-01-02-xx-xx-xx-xx.	- APR06815_B
		Model: AM110-01-03-xx-xx-xx-xx.	- APR06815_C
		Model: AM410-01-01-xx-xx-xx-xx.	- APR06817_A
		Model: AM410-01-03-xx-xx-xx-xx.	- APR06817_B

- Datasheet Change Log for ADR141A

Issue No. (Revision)	Date	Description /Changes
01	28.08.09	Original Revision
02	09.12.09	Settings Changed
03	26.12.09	New models added
04	01.08.10	Back Terminal arrangement changed
05	01.11.11	Model Definition changed and cold load added
06	10.12.11	C4A added

Note: Due to our policy to upgrade our products constantly, we reserve the right to supply products which may vary slightly from that indicated above.
